**Type EN volume flow controller**

**Type END volume flow controller**

TROX Type EN and END volume flow controllers are mechanical system-powered controllers and were developed for the control of flow rates in constant volume systems. The controllers are suited for both supply air and extract air.

- EN: Controller for nominal sizes 200 x 100 to 600 x 600
- END: Controller for nominal sizes 200 x 100 to 600 x 600 with additional acoustic cladding

Each controller is set up to a reference flow rate and has been subjected to an aerodynamic function test.

The required flow rate can be easily set without tools using an external scale. To simplify installation, the controllers can be ordered and fitted by nominal size. The required flow rate can then be easily and accurately set during commissioning.

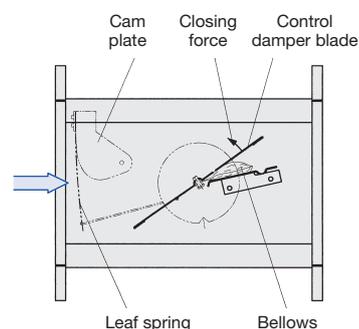

The EN controllers are also available with additional acoustic cladding to reduce case-radiated noise (END). For more stringent noise requirements the TX silencer can be used.

The controller operates without an external power supply. A control damper blade, shaft mounted supported on bearings, is adjusted by the aerodynamic forces such that the preset flow rate is held constant over the entire differential pressure range. Aerodynamic forces from air flow create a closing force on the damper blade. A self inflating bellows amplifies this force, acting

simultaneously as an oscillation damper. This closing force is counteracted by a leaf spring that unrolls over a cam plate. The cam plate is designed such that as the pressure differential changes, the damper blade adjusts to keep a constant flow rate within close tolerances.

Further, current information on application and selection can be found in the "Technical Documentation" download area of our website.

Also available on the Internet is the "Air terminal units" on-line programme for the design and selection of our units.

## Inexpensive commissioning

By a simple step and without need for preliminary measurements, the required flow rate value can be set using the pointer against the externally mounted scale of the Type EN or END . The advantage over conventional balancing dampers is that there is no need for repeated measurement and readjustment by a qualified commissioning engineer.

Should the system pressure change, e.g. by opening or closing of duct sections, the flow rates in the entire system will alter if balancing dampers are used; however, this is not the case if the Type EN and ENS volume flow controllers are used.

The controller reacts immediately and adjusts the damper blade position directly, so that the flow rate set is kept constant over the entire differential pressure range.

The Type EN controllers can be fitted with an electric actuator for setpoint value readjustment.

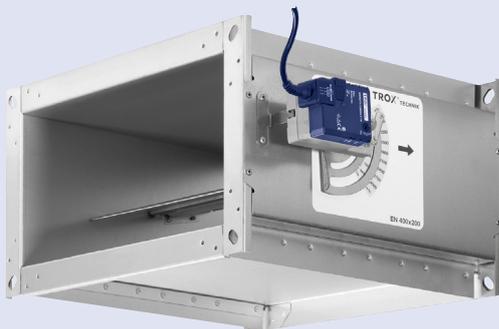

## Simplified installation

The Type EN and END volume flow controllers are fitted with flanges on both ends. This ensures very low leakage at the joint.

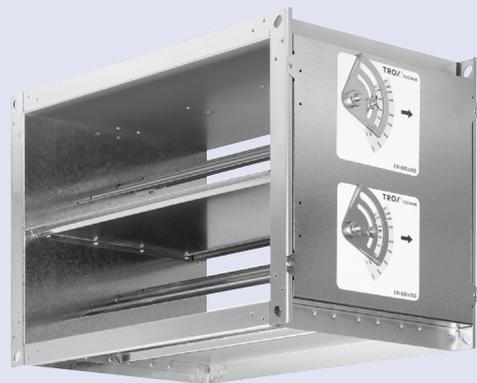

## Acoustic requirements

Depending on requirements, a TX silencer may be supplied to reduce the air-regenerated noise. (installed by others).

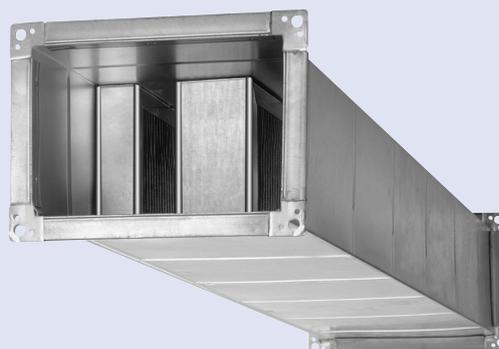

Type EN volume flow controller with actuator

Type EN volume flow controller,  $H \geq 400$  mm  
(Two controllers used)

TX silencer

# Construction · Dimensions · Accessories

## Characteristics

- Mechanical system-powered, without external power supply
- Suitable for supply and extract air
- Correct operation, even under unfavourable upstream and downstream conditions (straight length required upstream 1.5 B, downstream 0.5 B)
- Close tolerances on flow rate
- Flow rate setting using pointer on external scale, scale accuracy approximately  $\pm 4\%$
- Flow rate range 4 : 1
- Damper blade shaft supported in bearings
- Bellows also acts as an oscillation damper
- Differential pressure range 50 to 1000 Pa
- Independent of orientation
- Damper blade mechanisms maintenance-free
- Operating temperature range 10 to 50 °C

## Constructional features

- Rectangular form, rigid frame
- Flanged at both ends, suitable for fitting System 30 connecting sections

## Casing

- Casing and damper blade made of galvanised sheet steel
- Stainless steel leaf spring
- Polyurethane bellows
- Plain bearings with PTFE coating

## Additional acoustic cladding

- Outer cover in galvanised sheet steel
- Sound-absorbent lining
- Structure-borne noise isolation
- Cannot be retrofitted

## Actuators

- For setpoint readjustment
- 24 VAC or 230 VAC power
- Factory-fitted
- Small footprint thanks to compact construction

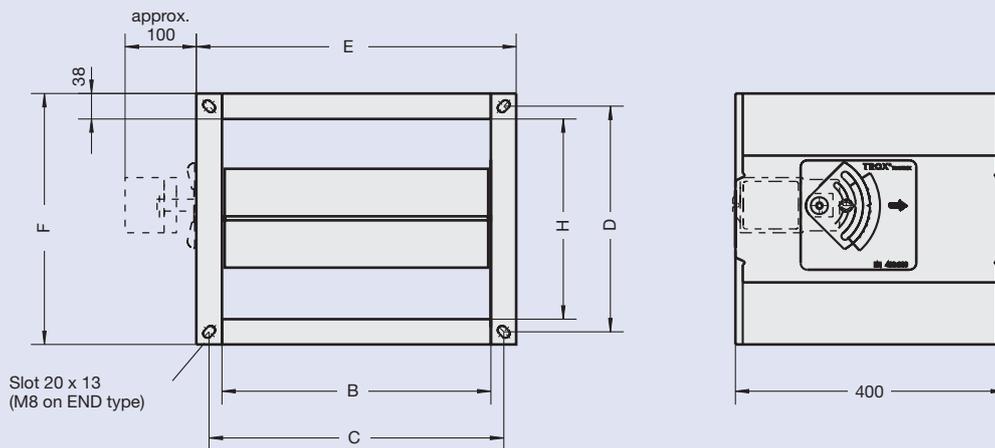

## TX silencer

- Suitable for EN/END controllers
- Casing in galvanised sheet steel
- Mineral wool lining conforming to DIN 4102, fire rating class A2, with RAL quality mark RAL-GZ 388, biodegradable as defined by TRGS 905 as well as EU directive 97/69/EC
- Mineral wool faced with glass-fibre fabric providing protection against erosion by air flow up to a maximum air velocity of 20 m/s, inert to fungal and bacterial growth

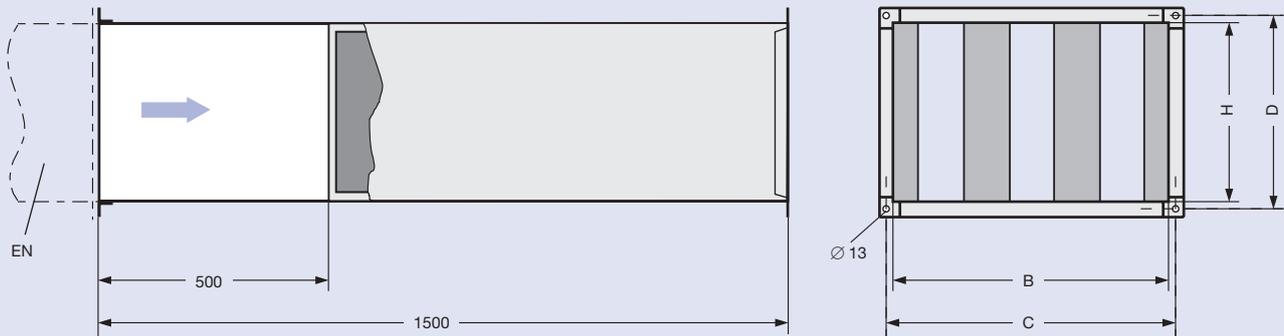

## Air heater

- Suitable for EN/END controllers
- See leaflet 5/20/EN/... for dimensions and technical data

 Acoustic data for differential pressure up to 1000 Pa, see on-line design programme "Air terminal units".

# Nomenclature · Air-regenerated Noise

## Nomenclature

$f_m$	in Hz: Octave band centre frequency
$L_W$	in dB: Sound power level of air-regenerated noise in the room (low pressure) side ducting
$L_{W2}$	in dB: Sound power level of case-radiated noise
$L_{W3}$	in dB: Sound power level of case-radiated noise with additional acoustic cladding
$L_{pA}$	in dB: A-weighted sound pressure level of air-regenerated noise in the room, system attenuation taken into account
$L_{pA1}$	in dB: A-weighted sound pressure level of air-regenerated noise in the room with TX silencer, system attenuation taken into account
$L_{pA2}$	in dB: A-weighted sound pressure level of case-radiated noise in the room, system attenuation taken into account
$L_{pA3}$	in dB: A-weighted sound pressure level of case-radiated noise in the room with additional acoustic cladding, system attenuation taken into account

$\Delta L_W$	in dB: Correction value for case-radiated noise without additional acoustic cladding
$\Delta L_{W1}$	in dB: Correction value for case-radiated noise with additional acoustic cladding
$\dot{V}$	in m <sup>3</sup> /h or l/s: Flow rate
$\Delta \dot{V}$	in $\pm$ %: Flow rate tolerance from setpoint value
$\Delta p_g$	in Pa: Total pressure differential
$\Delta p_{g\min}$	in Pa: Minimum total pressure differential

All sound power levels are based on 1 pW, all sound pressure levels on 20  $\mu$ Pa.

All noise levels measured in a reverberation chamber. The sound power data was determined and corrected according to DIN EN ISO 5135, February 1999.

Acoustic data for differential pressure up to 1000 Pa, see on-line design programme "Air terminal units".

# Air-regenerated Noise

## Example

Given:  $\dot{V}_{max} = 420 \text{ l/s}$  or  $1512 \text{ m}^3/\text{h}$   
 $\Delta p_g = 100 \text{ Pa}$   
 Required sound pressure level in the room  $45 \text{ dB(A)}$   
 For further assumptions, see calculation procedure

## Calculation procedure

Quick selection:

EN/400 x 200

Air-regenerated noise

$L_{pA} = 40 \text{ dB(A)}$

Case-radiated noise

$L_{pA2} = 33 \text{ dB(A)}$

Sound pressure level in the room =  $41 \text{ dB(A)}$

(after logarithmic addition, as the unit is in the false ceiling of the room, see drawing page 7)

Sound pressure level of case-radiated noise  
 $L_{pA2}$  **approx. 32 dB(A)**

Result: In a deviation from the quick selection, different room attenuation values have been assumed. However, the result remains within the requirement.

Correction values for case-radiated noise in dB(A)									
Installation location	$\Delta L_W / \Delta L_{W1}$	$\Delta L_W / \Delta L_{W1}$ in dB, related to $f_m$ in Hz							
		63	125	250	500	1000	2000	4000	8000
<b>EN</b>  $L_{W2} = L_W - \Delta L_W$	$\Delta L_W$	4	5	4	9	13	16	16	11
<b>END (with acoustic cladding)</b>  $L_{W3} = L_W - \Delta L_{W1}$	$\Delta L_{W1}$	7	8	10	19	25	29	28	20

## Specification text \*

Rectangular volume flow controllers for constant volume systems, mechanical system-powered (external power supply not required), for supply and extract air, in 19 nominal sizes. Consists of a casing with a control damper blade shaft mounted, supported on bearings with a bellows and an external cam plate with leaf spring.

### Special features:

- Mechanical system-powered, without external power supply
- Low-friction bellows, also operates as an oscillation damper
- The flow rate can be set with an external scale
- Close tolerances on flow rate
- Independent of orientation and maintenance-free

The basic construction of controller is supplied with a set reference flow rate (the required flow rate should be set on site by the customer).

The casing has flanges on both ends suitable for System 30 connecting sections. Differential pressure range 50 to 1000 Pa, flow rate range 4 : 1.

### Materials:

Casing and control damper blade are made of galvanised sheet steel, the control damper blade shaft is supported by plain bearings – with PTFE bearing coating. Polyurethane bellows.

### Options:

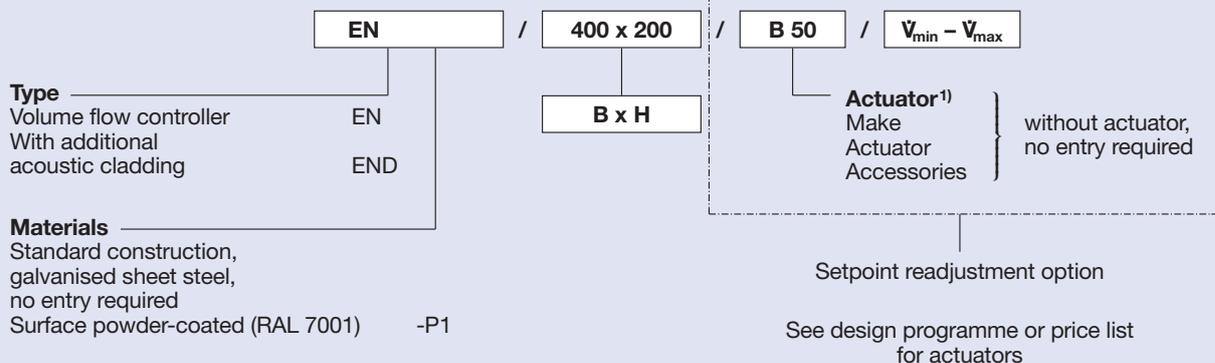

**Actuator**, 24 VAC or 230 VAC for setpoint value readjustment.

**Additional acoustic cladding** to reduce case-radiated noise. Consists of 40 mm mineral wool and outer cover of galvanised sheet steel. This gives a reduction of case-radiated noise of minimum 6 dB providing the upstream and downstream ducting has a rigid external insulation. Cannot be retrofitted.

**TX silencer**, for the reduction of air-regenerated noise, insertion loss approx. 9 dB at 250 Hz. Lining of mineral wool conforming to DIN 4102, fire rating class A2, with RAL quality mark RAL-GZ 388, biodegradable pursuant to TRGS 905 and EU directive 97/69/EG. Mineral wool faced with fibre-glass as protection against erosion, suitable for air velocities up to 20 m/s, inert to fungal and bacterial growth.

\* Text for standard construction;  
for the actuators, see the design programme or price list

## Order code

### Note:

400 mm high EN flow rate controllers consist of two controllers mounted one above the other. Each controller should then be set to 50 % of the required flow rate on site. These units can only be supplied as EN/END constant flow controllers, but not with actuators.

1) The minimum and maximum setpoint flow rates are set on the construction with an actuator.

## EN order example

Make: TROX  
Type: EN / 400 x 200

## TX order example

Make: TROX  
Type: TX / 400 x 200
